

# Pre-Award AV Plan Review

Independent technical pressure-testing before award or procurement

**Your AV / Workplace Technology leader remains the decision owner.** Cognitive AV reviews the project record - not your team.

## Decision question

Before committing significant capital, has the project record adequately controlled material technical, integration, lifecycle, support, acceptance, and interface risk?

## Core pilot

### CORE PRE-AWARD AV PLAN REVIEW

**\$7,500**

**Fixed fee** | Up to 20 senior-engineering hours

Target delivery: **10 business days** after the Document Readiness Gate is satisfied.

## What you receive

- Project evidence map and cross-document validation
- Prioritized findings and project-gate actions
- Residual-risk statement
- Technical-readiness opinion
- One 60-minute readout
- One bounded written clarification cycle

## Review boundary

One agreed and frozen project-document package. Typical inputs include owner requirements, AV drawings, room schedules, specifications, BOMs, proposals, SOWs, responsibility matrices, network requirements, commissioning plans, acceptance criteria, and applicable AV standards.

## Readiness opinions

### PROCEED

No material unresolved risks identified within the agreed boundary.

### PROCEED WITH CONDITIONS

Generally viable, with defined conditions at specified project gates.

### REWORK

Material issues should be corrected before the next commitment.

### INSUFFICIENT EVIDENCE

The record cannot support a responsible readiness conclusion.

## Independence

**We are not paid by the finding.** A sound project record and a Proceed opinion are successful outcomes.

## Explicit boundaries

The review does not include full system design, corrective redesign, production CAD, stamped engineering, programming, DSP development, procurement, project management, field supervision, commissioning execution, penetration testing, cybersecurity certification, unlimited revisions, or 24/7 support.

**Finding an issue and engineering the corrective design are separate scopes.**

The readiness opinion is an independent technical advisory opinion. It is not a certification, guarantee, licensed engineering seal, or representation that the project is risk-free. External AI processing is disabled by default unless explicitly approved by the client.
